Journey in Style

A brand by Hankook Tire
OFFICIAL PARTNER

When the Blue that represents rational value and the Red that represents emotional value meet, the Violet of Laufenn is born. Laufenn provides smart consumers both practical value and satisfaction.

Laufenn ensures an exceptional driving experience through optimized performance – In any weather or in any season, rain or snow, summer or winter.

Laufenn provides the performance you need over a wide range of conditions – in your everyday life, under any road conditions, on or off-road.

Confident

The ability Laufenn provides is rooted in its uncompromising commitment to quality. When you go to work or head out to meet your friends... When you go on a trip or venture out to a new place... Laufenn is there with you everyday providing optimized performance and confidence.

Simple

Laufenn is Simple – with no add-ons and nothing to spoil your driving experience. Committed to the basics, Laufenn offers a pure driving experience tailored to your needs.

Open-minded

Laufenn refuses to accept an one-size-fits-all attitude. You know value when you see it and are determined to embrace new choices. Making Laufenn your choice is transforming your own value into a new trend.

Sensible

Laufenn understands your refined taste. You have an extraordinary eye for quality – all at a glance. Your choices are always solid. Laufenn expresses your excellent style and represents your fashionable personality.

Z FIT EQ

Premium Sport Performance Summer Tire

Dry

Wet

Handling

Braking

The Z FIT EQ is a luxury premium tire that provides outstanding wet & dry performance.

FEATURES

Premium Sport Performance Tire with greatly improved wet braking and handling

- Optimised dry and wet roads
- Minimize the threat of hydroplaning on straight roads and during cornering
- Ensure running stability

Z FIT EQ

Speed Symbol : Y / (Y)

S.W. : 205~305

Series : 25~50

Inch : 17~22

EU Label : E / A / W2

Handling & Braking

Outstanding steering control and minimize stopping distance on both dry and wet roads.

Tread Pattern

Asymmetrical Design / A ribbed block maximizes longitudinal stiffness.

Side / Structure

High-density reinforced nylon belts and steel belts maintain optimum footprint during cornering.

Compound

A newly developed highly dispersible silica compound is applied.

Exceptional Handling Performance Through Asymmetrical Design and Optimum Pattern Design

Traction force during acceleration

Lateral force at slip angle 12°

An asymmetrical design combined with high-stiffness rib pattern maximizes handling performance on dry roads. Optimum pattern design maximizes traction and lateral force during cornering.

Improve Brake Force by Appropriately Combining the Longitudinal Stiffness of the Pattern Block with That of The Footprint

Continuous rib patterns improve longitudinal stiffness.

Simulation results are applied to achieve the optimum pattern and structure design.

High-Speed Performance

Safety

Preventing tire distortion at high speed under high temperature.

Solid Design for High-Speed Operation

High-density nylon belts prevent pressure from being concentrated on one side by distributing pressure equally when running at high speed. A new-concept structure minimizes elongation of tread contact at high speed.

Stabilized Aspects for High-Speed Operation

A new multiple-tread radius ensures balanced surface contact pressure and prevents distortion at high speed.

High-speed Predictive Models

Profile and structure design ensures optimum surface contact pressure and surface contact shape.

Tire section and profile simulation

Footprint pressure distribution and shape
(0~250km/h at 430kg_2.3bar)

Minimize Distortion at High Speed

Optimize distortion by reducing tread contact elongation at high speed while minimizing the difference in tread contact elongation in the center and on the shoulders.

Aquaplaning

Wet

Minimize the threat of hydroplaning on straight roads and during cornering.

Tread Pattern

A wide longitudinal groove is applied on the outer part of the tread.

Footprint

Footprint shape remains optimized when going straight ahead and during cornering.

3D Wave & Straight Groove

The outperforms by applying a wide straight groove on the outer edge and by maintaining the optimal footprint shape.

Maintaining the Optimal Footprint

Slip Angle = 0°

Slip Angle = 3°

Compound

Highly dispersible silica compounding and a new mixing process are applied.

Improves Compound Hysteresis Feature

Much better filler dispersion enhances traction performance.

● Silica aggregate ● Silica-rubber coupling ✕ Matrix X-link(Rubber-Rubber network)

Conventional

Advanced Compound

Advanced Silica Compound Technology

TYRE STRUCTURE

The Z FIT EQ adopts new technology for sport driving, engineered for high-end performance on dry and wet road.

Highly dispersible silica compound

—
Much better filler dispersion enhances traction performance.

Jointless Nylon cover

—
Maximises the tyres contact with the road for improved handling and tread life.

Wide steel belt layer

—
Better dry and wet handling.

High stiffness bead filler

—
Better handling and steering response.

Equilibrium carcass line

—
Enhance sidewall stiffness and durability.

Strong single strand bead wire

—
Improved uniformity and tire fitting.
